

VARIABLE FREQUENCY DRIVE (VFD) FOR 20 GPM (75 LPM) BOOSTER PUMPS

EFFICIENT – Because a VFD adjusts the speed of the motor based on real-time site demands and system flow requirements, it can reduce related energy consumption and costs.

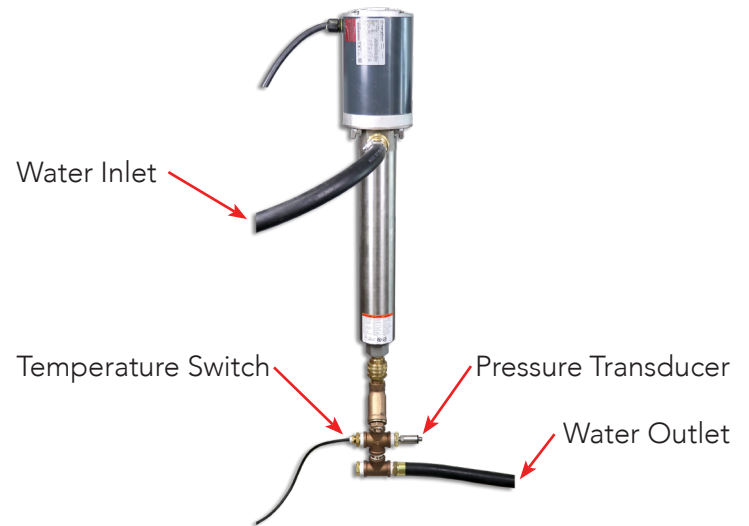

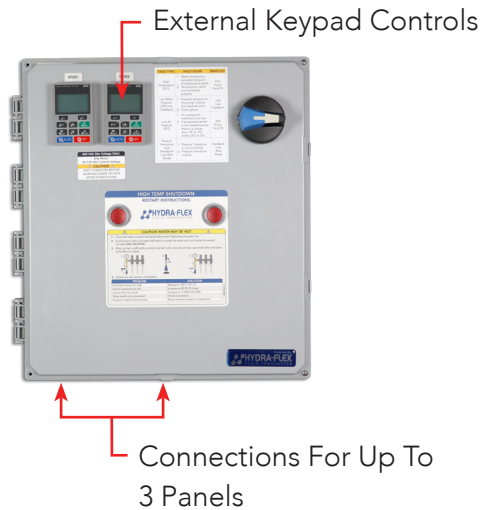

EXTENDS THE LIFE OF THE PUMP – Puts less wear and tear on the motor and results in cooler running pumps due to water not bypassing.

IMPROVED CHEMICAL CONSISTENCY – Tighter tolerances on a VFD eliminate pressure fluctuations.

POTENTIAL LOCAL UTILITY REBATES – The federal government and many local utilities offer incentives and rebates when installing energy efficient devices like VFDs. Contact your local utility or check the national database at www.dsireusa.org.
